

ADA SOLUTIONS

CASE
EMERGENCY SYSTEMS

***SERVING THE ADA COMMUNITY
WITH SAFETY AND SIMPLICITY***

Emergencies can happen to anyone, but for those with disabilities, requesting help can be even more challenging. Even everyday situations can be more difficult without sufficient ADA solutions in place.

That's why CASE Emergency Systems offers a number of different ADA-friendly options such as:

- » TTY touch pads and visual screens for the hearing-impaired
- » Braille badging to simplify use for visually impaired guests
- » Public address system with bright strobe for announcements or warnings
- » Customizable call routing for use as an ADA entry assistance point for otherwise non-ADA-accessible buildings
- » No-trench, wireless installations that can be located anywhere - well within wheelchair access
- » Passenger pick-up points for ADA transportation services
- » Drive-up retail order fulfillment

How CASE Works

No matter which of our products you choose for your location, all CASE equipment offers the same functionality and benefits.

Installs Where Access is Easiest

Communications equipment that relies on hard wiring can be out of reach or inaccessible to those with disabilities. CASE units are available 100% wireless with solar power panels, a 10-day back-up battery, and choice of 4G cellular or satellite phone connectivity. So, they can be installed alongside handicap ramps, at the base of stairways, and alongside sidewalks where everyone can reach them. Hard-wired options are also available, but are not a requirement to install CASE equipment.

Customized Connections

You choose where users are routed when a CASE unit is activated. Units can dial 911, or can route to your front desk, parking attendant, main security office, or anywhere else.

If your company is located in a non-accessible building, those requiring assistance to enter your place of business can request help with a simple one-touch button who notifies your staff inside.

Durable in All Kinds of Weather

Stainless-steel housings and components are made to be weather and tamper resistant in rain, snow, heat, wind, and more.

High-Visibility. Highly Audible

CASE units are easy for people to find thanks to a bright blue strobe, and a broad range of bold exterior colors. You can even choose to install additional strobes as necessary. The optional public address speaker system broadcasts at 106 decibels, loud enough to be heard up to clearly at 60 decibels at 1000 feet away.

High Tech Meets High Touch

To make sure your CASE units serve as many people as possible, you can add a TTY keypad and display and/or a faceplate camera to any product.

Self-Monitoring Maintenance

No need to engage maintenance teams in checking on CASE units — with the optional CASEAlert program, units perform scheduled self-checks and send reports to your central command team.

Perform an ADA Upgrade of Existing Call Boxes

If you're working with a legacy emergency calling system, it may lack the accessibility features and conveniences CASE automatically provides. Our retrofit kits are designed to upgrade an existing call box to better ADA standards, and are compatible with multiple different brands.
